PROFESSIONAL SUMMARY

Full Stack Developer with 3 years of commercial experience developing and maintaining a production CRM for an internet service provider (ISP). Own the software development lifecycle (SDLC): requirements analysis, database design, frontend and backend development, API integration, manual testing, deployment and maintenance. Build web and mobile applications and AI features using local large language models (LLMs).

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, PHP, Python, SQL, HTML
Backend and frontend: Node.js, Express.js, React, React Native, Expo
Databases and environment: PostgreSQL, relational databases, Docker, Linux
Integrations and AI: API, JSON, token-based authentication, LLMs, fine-tuning, KSeF
Telecommunications: VoIP, SIP, VLAN

PROFESSIONAL EXPERIENCE

NDI - Internet services | Tychy, Poland | Oct 2023 - Present

Software Developer | 2025 - Present

Telecommunications Equipment Installer | Oct 2023 - 2025

Software development responsibilities throughout employment, including the earlier role.

- Develop and refactor modules of a licensed CRM in PHP, JavaScript and Node.js: implement frontend and backend features, API endpoints and system integrations. Design PostgreSQL tables, relationships and SQL queries.
- Designed, tested and deployed an integration with Poland's KSeF e-invoicing system and maintain it in production. Integrated electronic signatures into contract workflows and CRM data into an interactive address and service coverage map.
- Analyze business requirements, perform manual testing in a test environment and deploy changes. Maintain the production system, diagnose issues and provide first-line user support.
- Designed and deployed VoIP/SIP telephony for business customers; configured routers and VLANs and prepared network coverage data for SIDUSIS.

SELECTED PROJECTS AND ACHIEVEMENTS

- **CRM inventory module:** Designed and deployed the SQL data model, device history, links to customer addresses and automated documentation generation. Replacing the paper workflow reduced inventory time by approximately 90%; continue to maintain the module.
- **AI call summaries:** Integrated the CRM with a system for calls, transcripts and summaries through JSON API endpoints with token-based authentication. Fine-tuned a local LLM. Reduced call documentation time from approximately 3 minutes to approximately 15 seconds.
- **Mobile application - test version:** Built a React Native, TypeScript and Expo application with an Express.js backend and CRM integration for customer requests. Independently designed and implemented the UI, database and security controls, and tested the application.

EDUCATION

IT Technician | Technical Secondary School No. 3, Tychy | 2019 - 2023
